

POWER APPS | CANVAS APP LAB

Create a machine ordering Power Apps canvas app

Build a multi-screen employee experience for browsing, selecting, and comparing coffee machines.

APP IN A DAY

Build a coffee machine ordering app

Create a canvas app that helps employees at different Contoso locations browse and compare available coffee machines.

Business need

Replace a manual request experience with a focused app.

Primary user

An employee choosing a replacement coffee machine.

Starting point

A blank canvas connected to supplied machine data.

Bigger journey

Later labs add Dataverse, a model-driven app, and approvals.

What will you build?

A working multi-screen canvas app, assembled one capability at a time.

Create the app

Start the canvas app and establish its structure.

Add screens

Separate browsing and comparison experiences.

Connect data

Bring machine records into the user experience.

Add behavior

Use formulas, selections, and navigation to make it interactive.

How Power Apps Studio is organized

You will move among the canvas, tree view, properties, formula bar, and data pane.

Canvas

Arrange controls and design what the user sees.

Tree view

Understand screens and the controls nested inside them.

Properties

Configure appearance and commonly used settings.

Formula bar

Define behavior with Power Fx expressions.

Data

Add and manage the app's connections.

Turn rows into a browsable gallery

The gallery repeats a visual template for each machine record in the connected data source.

Connect the source

Make the supplied machine data available to the app.

Set Items

Tell the gallery which table or collection to display.

Design one template

Configure the image and fields once; the gallery repeats them.

Capture selection

Let the user choose machines for the next step.

Browse, select, and compare

The app turns machine data into a guided decision experience rather than a static list.

Browse

Scan the available machines in a visual gallery.

Select

Capture the machines the user wants to evaluate.

Compare

Show selected machines together on a separate screen.

Continue

Use navigation to move through the experience.

Power Fx makes the app respond

Properties become dynamic when formulas react to user actions, app state, and data.

- Navigate**
Move between screens when the user selects a control.
- Collect**
Capture selected records for comparison.
- Filter and look up**
Show the records relevant to the current task.
- Set properties**
Drive text, visibility, color, and behavior from formulas.

What success looks like

A user can move through a coherent app and the interface reflects the data and choices correctly.

Visual clarity

Machine images and key details are easy to scan.

Working interaction

Selections, buttons, and navigation behave as intended.

Consistent state

The compare experience reflects the user's current choices.

Testable result

The app can be previewed and exercised from start to finish.

Before you begin

Confirm the environment and source files now so the build can proceed without interruption.

Power Apps access

Use an environment with a licensed user.

Lab setup complete

Finish the setup steps provided earlier in the workshop.

Sample file ready

Download the Microsoft Excel file supplied for the exercises.

Work sequentially

Complete each exercise in order and test as you go.

Open the lab and build along with the instructor.

Lab

- Create a machine ordering Power Apps canvas app
 - Estimated time: 1 hr 24 min
 - <https://learn.microsoft.com/en-us/training/modules/power-apps-canvas-app-online-workshop/>

Open the lab and build along with the instructor.

Lab Notes – Unit 2 of 6

- Section 5, Step 15
 - You may need to click the "..."/>

Open the lab an

Lab Notes – Unit 3 of 6

- Section 1, Step 3
 - It's easier to type “Import from Excel” into the search textbox

Lab Notes – Unit 3 of 6

- Section 2, Steps 12 and 13
 - Selecting the template cell
 - Click directly on *galMachineType* to select the gallery
 - Click the pencil icon (Edit gallery button) in the upper-left corner of the first item inside your gallery on the canvas

Open the lab and build along with the instructor.

Lab Notes – Unit 3 of 6

- Section 2, Steps 12 and 13

Lab Notes – Unit 3 of 6

- Section 2, Step 12
 - *TemplateSize* property
 - Two options for accessing:
 - The *Properties* sidebar on the right
 - The property dropdown in the top left
 - Change to a smaller number (like 150 or 170 depending on your screen space)

Open the lab and build along with the instructor.

Lab Notes – Unit 3 of 6

- Section 2, Step 12

Lab Notes – Unit 4 of 6

- Section 3
 - Before beginning this section: Read the note at the end of step 10
 - Rename the objects to match the first screen shot in this section:

Open the lab and build

Lab Notes – Unit 4 of 6

- Section 3
 - Step 6
 - Should read "Repeat the previous steps to add **labels** to display the other machine properties, "

Open the lab and build along with the instructor.
